

PILLOW LITE

inflate your light

PATENTED SYSTEM

Air Frame 120

A inflatable LED softbox that makes your life easier on set

Inflatable & ultra-light

Unprecedented lightness

Unlike metal-structured softboxes, the Air Frame is ultra-light thanks to its inflatable frame. It is perfect for effortless tracking of actors.

Quick to set up

The frame inflates and deflates in just a few seconds. You save time and space

Ultra-soft light

Thanks to its larger diffusion surface compared to metal structures on the market

Safety

The frame is safe, even in the event of an impact

For years, the Air Frame has become a spotlight I can't do without. Both economical, compact, lightweight, reliable, and easy to use, it offers (thanks to its ingenious design and the quality of its diffusion fabric) a light that is both soft and silky, with a particularly elegant result on faces. In short, an essential spotlight with unique features and remarkable photographic qualities.

Vincent Richard, Director of Photography

Air Frame 120 Kit
