

PATENTED SYSTEM

Air Frame 2

Larger than the Air Frame 120, ultra-light, it allows you to easily and quickly install ceiling light fixtures.

Inflatable & ultra-light

Unprecedented lightness

Unlike softboxes or metal structures, the Air Frame 2 is ultra-light and can even be suspended from an arm. It is also ideal for creating ceiling light fixtures.

Quick to set up

The Air Frame 2 inflates and is installed in just a few minutes!

Ultra-soft light

Thanks to its large surface, the light is very soft. The "Pillow Style" diffusion fabric provides an incredibly soft and natural light, almost magically!

Safety

The Air Frame 2 is so light that it is safe, even in the event of an impact

Optimized light control

The adjustable height blackout skirts and the honeycomb louver allow for optimal light control.

Air Frame 2 Kit

- 1 Inflatable frame
- 2 Removable aluminum mounting cross
- 3 Rear fabric receiving the LED canvases
- 4 5 Diffusion fabrics (light and medium)
- 6 High-flow pump
- 7 Very large canvas bag to store the inflated frame (also serves as protection during the frame inflation)
- 8 XL transport bag

Specifications

- Weight of the empty frame : 2,6 kg
- Weight of the rear fabric + diffusion : 1,1 kg
- Overall external dimensions : 130cm x 220cm
- Internal dimensions/opening : 103cm / 203cm

LED systems for all Air Frames are optional. We have many solutions to offer depending on your lighting needs.

The Air Frames are also compatible with *Aladdin*, *Cineroid*, *Fomex* and *Carpel* light products.

For years, the Air Frame has become a spotlight I can't do without. Both economical, compact, lightweight, reliable, and easy to use, it offers (thanks to its ingenious design and the quality of its diffusion fabric) a light that is both soft and silky, with a particularly elegant result on faces. In short, an essential spotlight with unique features and remarkable photographic qualities.
